

Development and Social Change: A Global Perspective

Development and social change are two inextricably linked concepts that have shaped the trajectory of human civilization throughout history. The processes of economic growth, social transformation, and political empowerment are deeply interconnected, influencing each other in complex and often unpredictable ways. In the contemporary world, the pursuit of development has become a global imperative, driven by the urgent need to address poverty, inequality, and environmental degradation. Yet, despite decades of development interventions and initiatives, progress towards achieving a more just and equitable world has been uneven, and many challenges remain.
