The Target Slope Measuring System (TSMS) is a revolutionary technology that is transforming the way golf courses are designed and built. Developed by Nick Riley, a leading golf course architect, the TSMS uses lasers to measure the slope of a green and its surrounding terrain, creating a detailed 3D model of the putting surface.

This information can then be used to design greens that are more challenging and exciting to play, while also being more visually appealing. The TSMS has been used on several high-profile golf courses around the world, including the Olympic Golf Course in Rio de Janeiro and the Trump International Golf Club in Dubai.

## How the TSMS Works

The TSMS uses a combination of lasers and sensors to measure the slope of a green. The lasers are mounted on a tripod and aimed at the putting

surface, while the sensors measure the distance between the lasers and the ground. This information is then used to create a 3D model of the green, which can be viewed on a computer screen.

The TSMS can measure the slope of a green with a high degree of accuracy, even on very complex surfaces. This information can then be used to design greens that are more challenging and exciting to play. For example, the TSMS can be used to create greens with multiple tiers, subtle breaks, and hidden slopes.

### **The Benefits of the TSMS**

The TSMS offers several benefits over traditional methods of measuring the slope of a green. These benefits include:

- **Accuracy:** The TSMS can measure the slope of a green with a high degree of accuracy, even on very complex surfaces.
- **Speed:** The TSMS can quickly and easily measure the slope of a green, making it a valuable tool for golf course architects.
- **Versatility:** The TSMS can be used to measure the slope of any type of green, regardless of its size or shape.

### **The Future of the TSMS**

The TSMS is a revolutionary technology that is changing the way golf courses are designed and built. As the technology continues to develop, it is likely that the TSMS will become even more widely used by golf course architects around the world.

The TSMS has the potential to revolutionize the game of golf. By making it possible to design greens that are more challenging and exciting to play,

the TSMS can help to make golf a more enjoyable and rewarding experience for everyone.

The Target Slope Measuring System is a revolutionary technology that is transforming the way golf courses are designed and built. This cutting-edge technology offers several benefits over traditional methods of measuring the slope of a green, including accuracy, speed, and versatility.

As the TSMS continues to develop, it is likely that it will become even more widely used by golf course architects around the world. This revolutionary technology has the potential to revolutionize the game of golf, making it more challenging, exciting, and enjoyable for everyone.
